

(Unclassified // FOUO)
CSWC Operational Period Summary
1800 April 10 2018 to 0600 April 11 2018

Redding has 225+ miles of trails, perfect for biking. It's one of the reasons why the San Francisco Chronicle labeled Redding's trails as the "Gem of the U.S. Trails System." More at <http://VisitRedding.com/trails>.

RIVER FORECAST

Cal OES INLAND REGION

River Forecast – The following rivers are expected to meet or exceed Flood Stage:

Placer County:

- Truckee River at Truckee is forecast to be above flood stage at 4.7 feet the morning of 04/10/18. The river is expected to see flows between 4.5 feet and 4.7 feet through 04/15/18. Flood stage is 4.5 feet.
 - Flood Stage. Minor flooding from Bear Creek in the Alpine Meadows area to Truckee. Truckee River bike path between the River Ranch at Alpine Meadows Road to Tahoe City begins to flood. Basements and yards of some low-lying homes along the river begin to flood. Deep Creek Campground begins to flood. About 2270 cfs. USGS estimates this much flow has about a 1 in 4 chance of being exceeded any year.

River Forecast – The following rivers are expected to meet or exceed Monitor Stage:

Sutter & Yolo Counties:

- Sacramento River at Fremont Weir crested at 33.2 feet the morning of 04/09/18. As of 04/10/18 at 1600 hours, it is at 32.7 feet and continues to recede. Flood stage is 39.5 feet.

Merced County:

- Merced River at Stevinson is expected to crest at 67.7 feet the evening of 04/11/18. Flood stage is 71.0 feet.

WEATHER OF CONCERN

Weather of Concern

- A fast moving system will produce periods of medium to light rain and high elevation snow in portions of Northern California valley and mountainous locations through the evening today, 04/11/18.
- The National Weather Service has issued High Wind Warnings and Fire Weather Watches for portions of Central and Southern California for today, 04/11/18, through tomorrow evening, 04/12/18. The conditions will produce extremely high and dangerous cross winds associated with areas of blowing dust and sand.

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

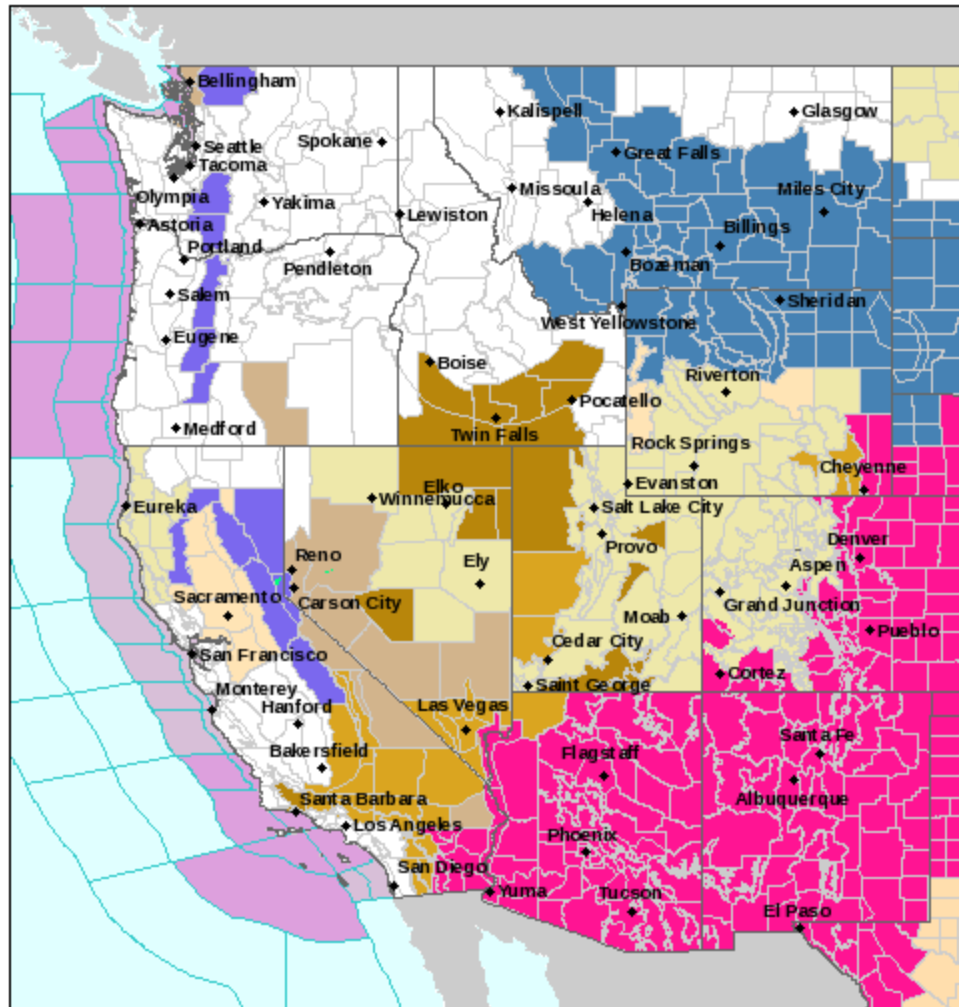

An unsettled weather pattern, due to a persistent strong jet and embedded Pacific waves, will affect the region this week, and bring light to moderate precipitation, cooler than normal temperatures and a gustier wind flow. Confidence is high for this pattern shift, but only moderate in terms of timing the wave passages beyond 5 days. The first wave passage occurred yesterday, 04/10/18. The second wave passage will be stronger and contain light to moderate amounts of precipitation today and tomorrow. This wave will be cooler so snow levels will drop to between 3,000 to 4,000 feet tonight into tomorrow. Wind speeds will increase today ahead of the cold frontal passage. Gusts between 40 to 50 mph once again favoring the far north and east will be possible then. The cold front will swing across the region this evening and lead to a more westerly flow tomorrow although speeds will trend lower. Humidity levels will climb the next few days and strong winds will not line up with low humidity readings.

SOUTHERN CALIFORNIA

Significant cooling and big increase in humidity will occur today and tomorrow as a Pacific trough moves inland over Northern California. Temperatures will be 5 to 10 degrees below normal by tomorrow, with most valley highs staying in the 60s. Showers will form over the Sierra tonight with up to an inch of rainfall. The snow level will be around 6,000 feet. Westerly winds of 20 to 40 mph with gusts to 60 mph will surface across the mountain ridges and desert passes this afternoon through tomorrow afternoon. North winds of 20 to 40 mph with gusts to 60 mph will surface across much of Santa Barbara County and the Grapevine tomorrow night.
